

Ms. Hataichanok Chinauparawat

Director of Statistical Forecasting Division

Candidate for the Governing Council of Statistical Institute for Asia and the Pacific

---

Ms. Hataichanok Chinauparawat envisions a future where the Statistical Institute for Asia and the Pacific (SIAP) becomes the premier center for statistical capacity building, innovation, and collaboration to support data-driven policy-making and sustainable development across the region. In alignment with the SIAP Strategic Plan 2025-2029, she is committed to strengthening statistical resilience, inclusivity, and innovation through modernized training approaches, enhanced digital capabilities, and strategic partnerships.

Her vision is built on four key pillars:

1. Elevating Statistical Capacity through Innovative and Inclusive Learning

- Expand e-learning platforms, virtual courses, and hybrid training programs to provide flexible and accessible capacity-building opportunities for all member states.

- Strengthen Training of Trainers (ToT) programs to foster knowledge-sharing networks and enable national experts to further build local capacity.

- Enhance blended learning methodologies by integrating traditional statistical methods with emerging tools such as AI, machine learning, big data, and geospatial analytics.

2. Advancing Data Quality, Governance, and Accessibility

- Support the modernization of statistical business processes in national statistical offices, ensuring alignment with international standards for timely, reliable, and disaggregated data.

- Promote data governance frameworks, ethical AI usage, and responsible data management to safeguard integrity, accuracy, and security in statistical operations.

- Bridge data gaps for Sustainable Development Goals (SDGs) by fostering innovative approaches to integrating non-traditional and administrative data sources.

3. Strengthening Regional Collaboration and Cross-Sectoral Partnerships

- Enhance engagement with National Statistical Training Institutes, international organizations, and regional bodies to co-develop and co-deliver specialized training programs.

- Foster South-South and triangular cooperation among countries to facilitate knowledge exchange and localized solutions to shared statistical challenges.

4. Building Sustainable and Agile Statistical Systems

- Equip national statistical systems with advanced methodologies and emerging technologies to improve adaptability and responsiveness to new data challenges.

- Support capacity-building programs that enhance leadership and managerial competencies among NSO officials, ensuring stronger governance of statistical systems.

By championing these strategic priorities, Ms. Hataichanok is dedicated to positioning SIAP as the leading regional center for statistical training and development in Asia and the Pacific. She envisions SIAP as a driving force in supporting and making a difference for countries facing statistical challenges, ensuring that every member state has the expertise, resources, and networks needed to produce and utilize high-quality statistics for evidence-based policymaking and sustainable development.
