

2021 Population and Housing Census of Türkiye

- The United Nations (UN) and European Union (EU) recommend that countries make a "population and housing census" in years close to years ending in "0" in order to obtain comparable statistics on population.
- In this context, studies on "2021 Population and Housing Census (PHC)" are ongoing by TurkStat based on the following international references:

- UNECE Conference of European Statisticians Recommendations for the 2020 Censuses of Population and Housing
- UNSD Principles and Recommendations for Population and Housing Censuses
- EU Regulations:

Regulation (EU) 2017/543 (CIR-1)	201	tion (EU) 7/712 R-2)	201	ation (EU) 17/881 (IR-3)	Regulation (EU) 2018/1799 (CIR-4)
Tech. specifications for the census topics and their breakdowns	Reference year	EU census programme and metadata	Quality reporting	Technical format for data transmission	Selected census topics geocoded to a 1 km ² grid
Regulation (EC) No 76 population and hous					allows a 'direct temporary statistical action':

UNECE

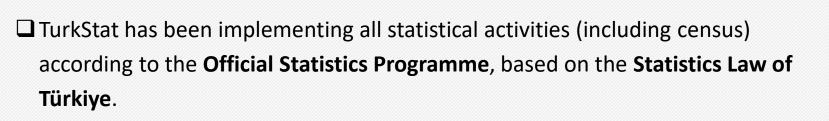

Conference of European Statisticians Recommendations for the 2020 Censuses of Population and Housing

9.06.2023

Legal Base

- Thus, TurkStat does not need a special census law.
- 2021 PHC and related issues were added to
 2022-2026 term Official Statistics Programme.

According to the mentioned Law:

In order to be used for the production of official statistics, the institutions and organizations are obliged to submit or open to use of the TurkStat the records and other data files they compile, process and store...

On the other hand, administrative registers which were obtained only for statistical purposes by TurkStat <u>cannot be shared with any institution or</u> <u>organization at microdata or record level.</u>

Commitee for PHC

□ Steering Committee was established (June 2018):

- -Consists of a vice president and
 - 5 related heads of departments of TurkStat
- Objectives of Census Steering Committee:
 - —To coordinate all processes of 2021 PHC
 - —To decide the working groups
 - —To decide the registers to be used
 - —To determine the needs (budget, IT infrastructure)
- U Working groups on «Labor Force Statistics» and «Quality» were established.
- Local consultancy service (from academia and private sector) on «Missing Data Estimation» is provided.

וער'

Available:

- Population (ABPRS): Demography, migration, household
- Address (NAD)
- Education (National Education Statistics Database)

□Not available/complete:

- Employment and Unemployment
- Buildings and Dwellings

- 2021 PHC was actually planned to be <u>fully</u> register-based and studies were carried out in this direction.
- However, it is seen that there is <u>no single and complete (all requested attributes for all units)</u> administrative data <u>source available</u> for the census type statistics on housing and labour force (employment/unemployment).
- □ Therefore, separate studies has been carried out for these two topics.

□For housing characteristics, setting up a registration system for buildings and dwellings has been one of the institutional targets of TurkStat.

- However, establishing a such a registration system will take time. It is obvious that the planned registration system will not be available during census period.
- In order to eliminate the lack of administrative registers in this area, a Survey on Building and Dwelling
 Characteristics, 2021 was carried out by TurkStat in October 2021-March 2022 period.

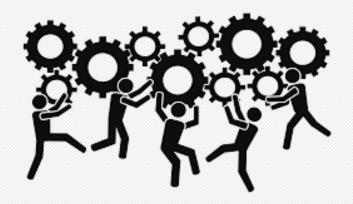

🏦 🚎

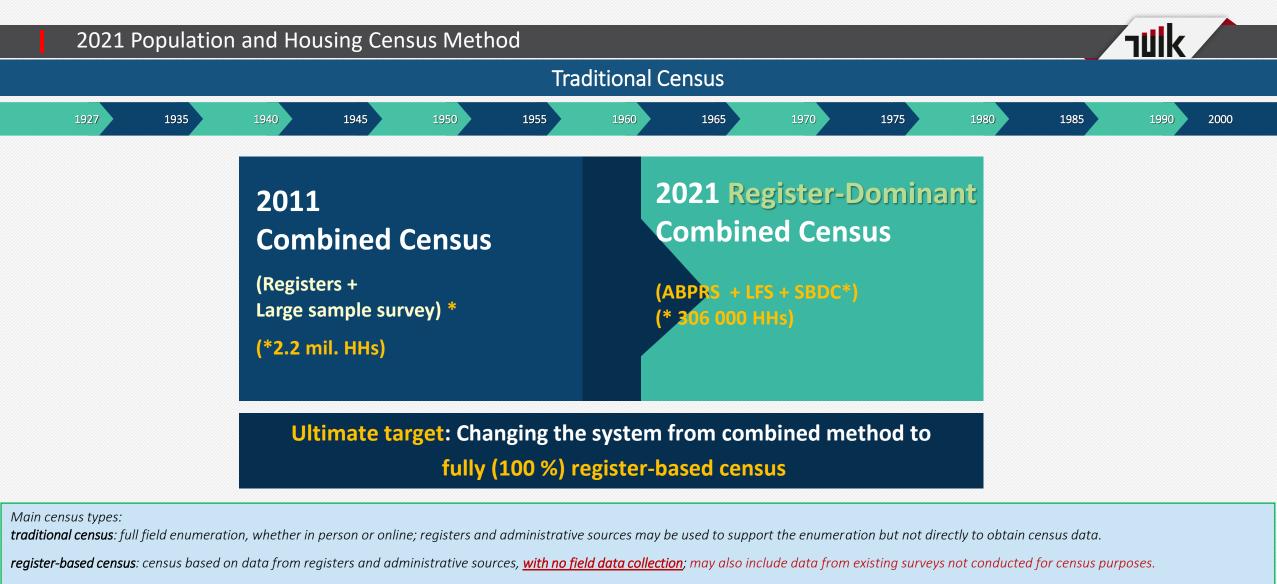

Survey on Building and Dwe	elling Characteristics, 2021
Sampling unit	Household
Method	CATI
Sampling Frame	Addresses registered in ABPRS, where households reside.
Sampling Size	306 thousand and 615 addresses
Estimation Level	Province (NUTS 3)
Length of Questionnaire	11 questions in two parts (Part 1: Building, Part 2: Dwelling)
Average duration of interview	~10 minutes
Field Application	4 October 2021 – 1 April 2022

- For census-type labour force characteristics, the target in the first step was to set up an integrated database called "Population Characteristics Database (PCDB)".
 - It is planned that this database will be the substructure of the forthcoming register based census (particularly for labour force characteristics) and will also serve as an invaluable data source for the post-2021 PHC.
- Using Household Labour Force Survey (LFS) data to produce estimates for census purposes is the alternative method.

combined census: some data obtained directly from registers or administrative sources, while other data are collected through field data collection conducted specifically for census purposes, covering the whole population or only a sample.

rolling census: based on cumulative continuous sample survey covering whole country over an extended period. Source: https://statswiki.unece.org/display/censuses/Censuses+of+the+2020+round

4th February 2022

Population and Housing Census, 2021

19th December 2022

Survey on Building and Dwelling Characteristics, 2021

27 th December 2022

28th December 2022

Census Year	Method	Cost (According to March 2022)
2000	Traditional	33 million Euro
2007	Establishment of the ABPRS	27 million Euro
2011	Combined	7 million Euro
2008-2021	Production from the ABPRS	0 Euro

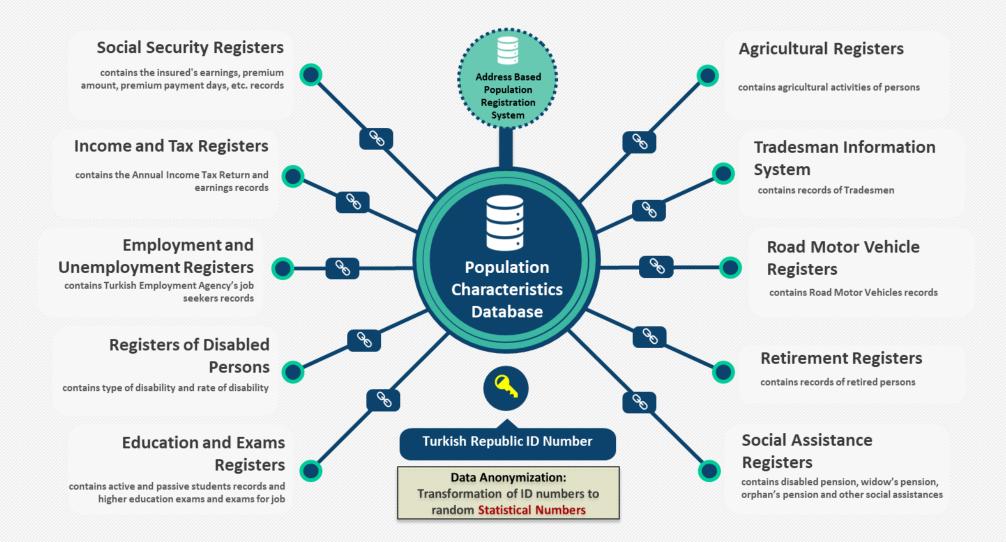

Population Characteristics Database

- Population Characteristics Database (PCDB) project, of which responsibility was given to TurkStat according to the Eleventh National Development Plan, will be used for statistical purposes.
- This database can basically be defined as a database established by the integration of ABPRS with a wide variety of other administrative registers. In addition to the population, demography and migration characteristics in ABPRS, PCDB will provide integrated information on the socio-economic characteristics of the individuals living in the country.

Thanks for your attention
