Mister Chair, Excellencies, Ladies and Gentlemen,

In today's interconnected world, the digital revolution is fundamentally reshaping our societies and economies, offering unprecedented opportunities for sustainable development. The Republic of Azerbaijan stands at the forefront of this transformation, demonstrating how digital innovation can enhance governance, promote inclusivity, and support environmental sustainability.

Our nation has made significant strides in creating a digital ecosystem that serves our citizens and contributes to our sustainable development goals. A cornerstone of this success is our comprehensive e-government portal, which offers more than 400 public services, streamlining processes and making government more accessible to all Azerbaijanis.

We have embraced a holistic approach to digitalization, implementing a single sign-on system, Digital Login, across more than 100 government and private sector information systems. This integration not only simplifies access for users but also enhances the security and efficiency of our digital services.

Innovation in digital identity is another area where Azerbaijan leads, offering several types of e-signatures, including cutting-edge e-signatures based on digital biometric recognition. This approach not only ensures the security of digital transactions but also paves the way for more personalized and accessible public services.

Our national data and document exchange platform facilitates seamless interaction among government information systems, underpinning our commitment to transparency and efficiency. This platform is vital for our digital governance ecosystem, enabling real-time data sharing and decision-making.

Azerbaijan has also developed sector-specific digital solutions such as e-procurement, e-social, e-justice, e-notaries, e-agro, e-education, e-food safety, e-taxes, etc. Each of these platforms is designed to meet the specific needs of our citizens, while also contributing to our broader goals of efficiency, transparency, and sustainability.

In the context of global environmental challenges, our digital transformation initiatives offer valuable insights into how technology can support sustainability. From improving resource management through e-agro and e-food safety platforms to enhancing transparency in environmental governance through e-justice and e-notaries, digitalization is a powerful tool in our sustainable development arsenal.
As we prepare to host the global community for COP29 in Baku, we look forward to showcasing not only our commitment to climate action but also how our digital advancements can support environmental sustainability. The conference will serve as a platform to explore the synergies between digital innovation and sustainable development, highlighting the role of technology in advancing the 2030 Agenda for Sustainable Development.

In closing, let us remember that the digital transformation journey is about more than just technology—it's about people, inclusivity, and creating a sustainable future for all. Azerbaijan remains dedicated to sharing our experiences and learning from the global community, as we collectively harness the power of digital innovation for a better world.

Thank you.
