

Pacific 2024 Voluntary National Reviews Clinic

An Associated Event of the Seventh Pacific Forum on Sustainable Development

Mainstreaming LNOB evidence to VNRs

23 November 2023

Hybrid, Suva

What is ESCAP LNOB analysis?

ESCAP LNOB Analysis

- An empirical analysis of inequality and gaps in access to key services and opportunities
- An efficient disaggregation tool that captures intersectionalities among individual/household circumstances
- Driven by data that are nationally representative and ideally conducive to subnational disaggregation
- Based on Classification and Regression Tree Analysis (CART) and Dissimilarity Index

Basic Assumptions

- Access to key **services and opportunities** should be universal.
- **Individual or household circumstances** should **NOT** impact access.

Why is LNOB analysis important?

Find which SDGs have the most "Left Behind"

SDGs are not equal in terms of the size and composition of groups left behind in their achievement.

Uncover who are the "Left Behind" in specific SDGs

Unique combinations of individual and household circumstances identify who are left behind and where.

Monitor gaps and inequality in SDG achievements?

The groups that are furthest left behind change over time across SDGs both for the good and the bad.

Who can use the LNOB analysis?

Governments

Design and implement truly inclusive development policies that leave no one behind.

Civil Society

Advocate and influence policy design and implementation with evidence.

Academia

Conduct more research inspired by latest LNOB results.

Development Partners

Support policymakers with inclusive projects that contribute to sustainable development.

- **Highlights inequalities** in SDG indicators at **national** and **subnational** levels for **30 countries** in Asia and the Pacific in **2010-2022** period based on **DHS** and **MICS** data.
- **Identifies** groups that are **furthest behind** in **16 SDGs** on **basic services, child health, women's health, education, VAW and financial inclusion** based on demographic, socio-economic and cultural circumstances.
- **Helps** policymakers understand **whom to prioritize for interventions** to reduce inequality of opportunity.
- **Monitors** gaps and inequality in SDG achievements and supports **Voluntary National Reviews**.

Current Data Sources

DHS and MICS Surveys

Sources used

Multiple Indicator Cluster Survey (MICS)

Demographic and Health Survey (DHS)

What they are

Nationally representative household surveys that provide data for a wide range of monitoring and impact evaluation indicators in the areas of population, health, and nutrition.

Why were they selected

Comparability across countries

Accessibility of the data

The **rich set of questions** on health, demographic and basic socioeconomic data that refer both to the household and to individuals

Availability

30

Asian and Pacific Countries

Basic Resources

- Basic drinking water
- Basic sanitation
- Clean fuel
- Electricity
- Internet usage
- Mobile phone (household)
- Mobile phone (individual)

Child and Family Health

- Ability to protect from COVID -19
- Family planning (demand met with modern methods)
- Skilled birth attendance
- Overweight
- Stunting
- Wasting
- **Birth Registration (Soon)**

Finance

- Bank account (household)
- Bank account (individual)
- Financial Inclusion

Education

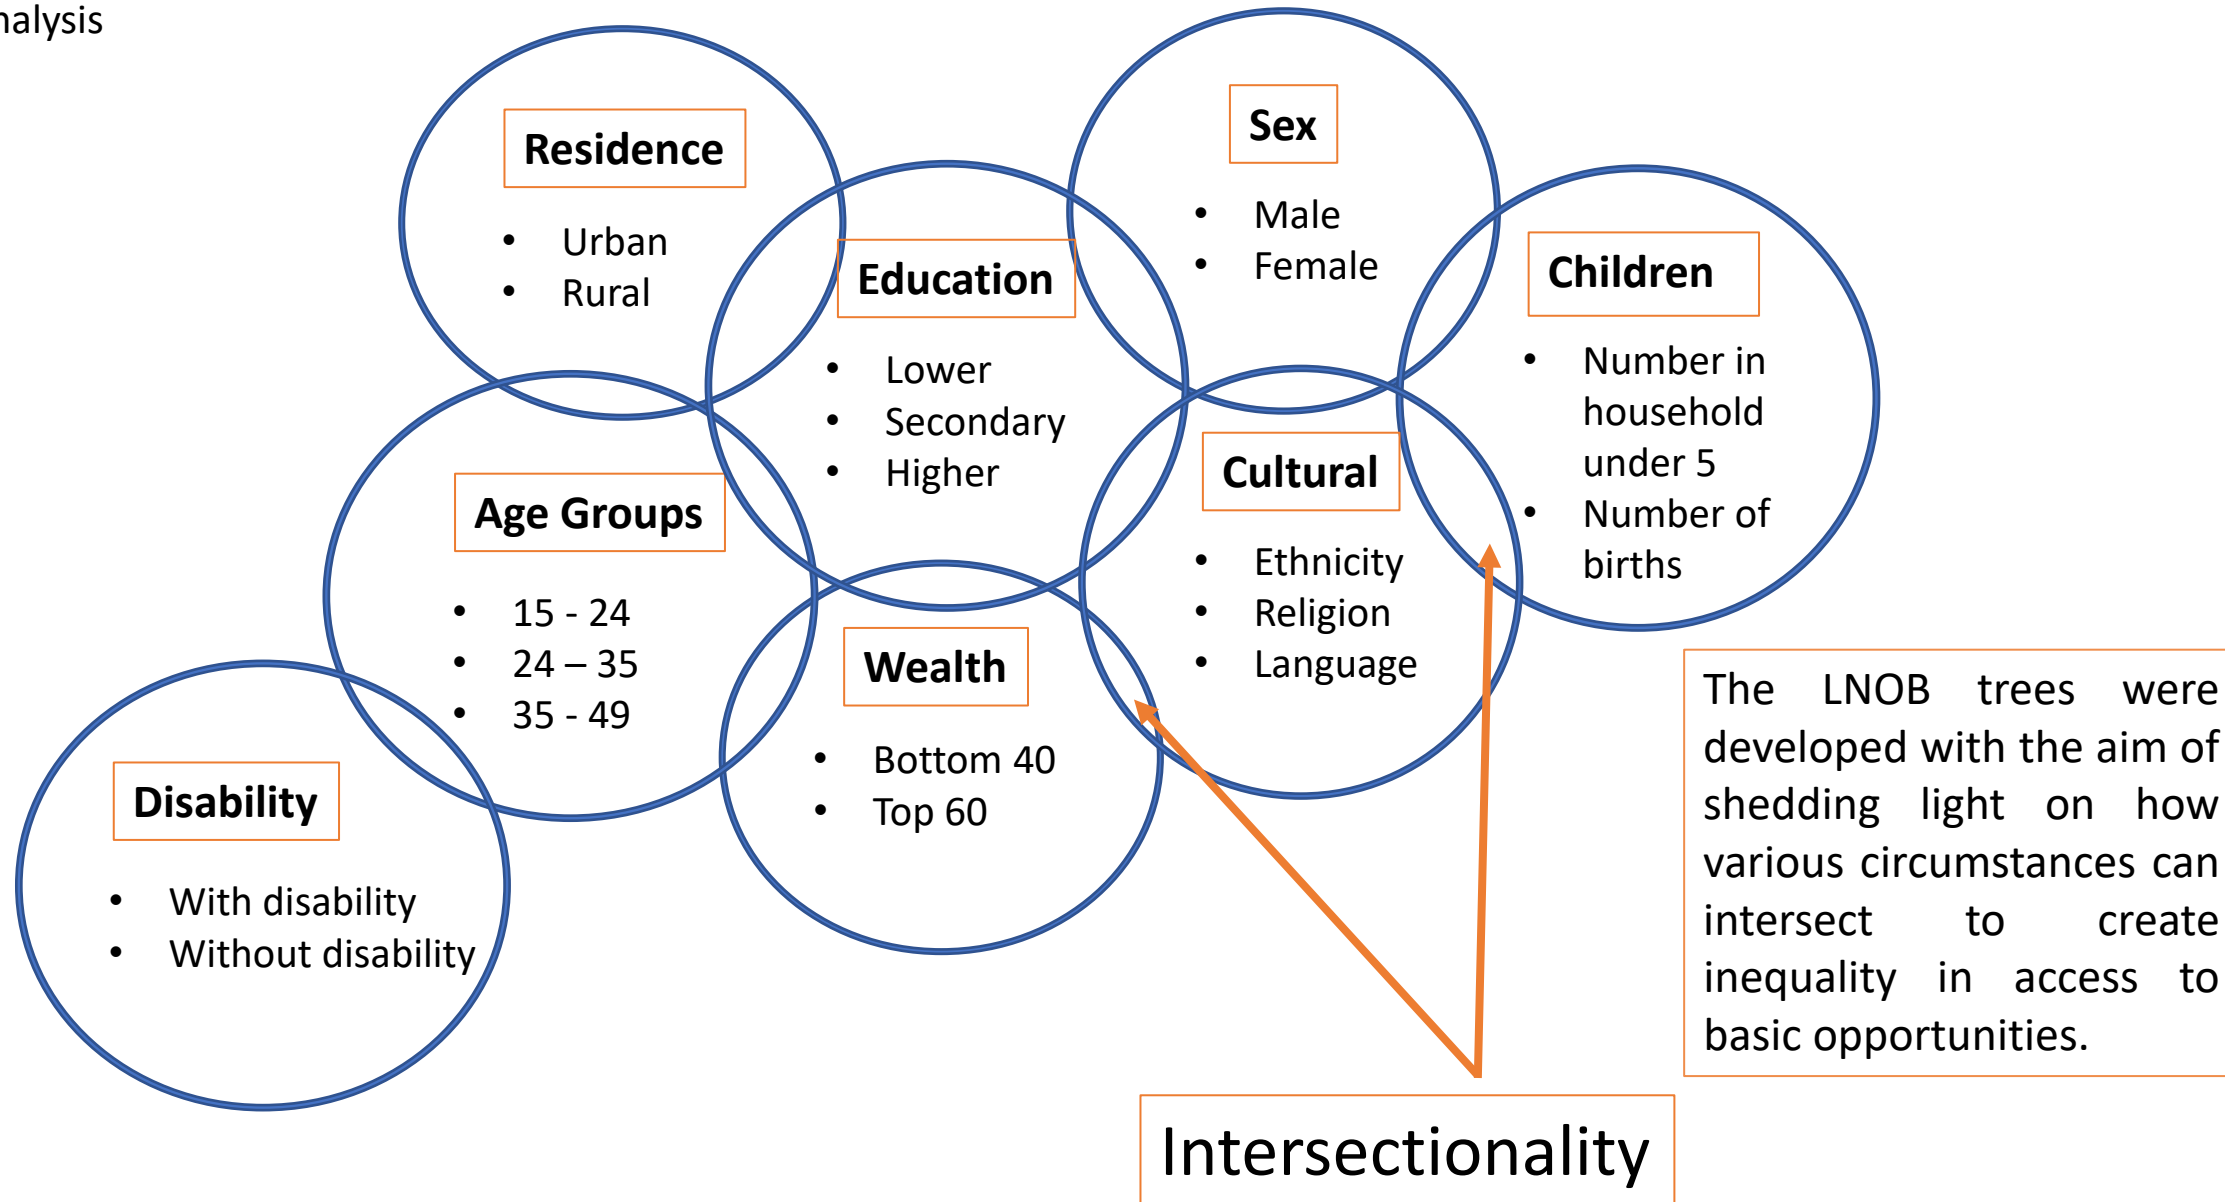

- Early childhood education
- Secondary education (completed, 20-35 yrs)
- Secondary education (completed, 35+)
- Tertiary education (attended, 25– 35 yrs)
- Tertiary education (attended, 35+)
- **ICT Skills (Coming Soon)**
- **Literacy (Coming Soon)**

Violence against women

- Any type of violence against women
- Psychological violence against women
- Violence against women justified
- Physical violence against women
- Sexual or physical violence against women
- Sexual violence against women

About the Social Protection Simulator

The ESCAP Social Protection Simulator estimates the impact of introducing social protection scheme on poverty, inequality and consumption. The impact can be estimated for rural and urban households, as well as for different income groups and family configurations. It also computes the cost of simulated programmes, providing different illustrative options to expand fiscal space for social protection.

Users can design social protection schemes in a country by setting parameters related to eligibility criteria, coverage levels and benefit amounts. The Simulator allows the user to analyze one scheme at a time or to combine different schemes and build a customized social protection package.

Social Protection and SDGs in FS Micronesia

1

UNIVERSAL CHILD, DISABILITY AND OLD AGE BENEFITS IN FS Micronesia...

2

WOULD LIFT

30%

OF THE POOR OUT OF POVERTY at the international extreme poverty line

4.2%

of GDP

Mainstreaming Evidence in Practice

ESCAP LNOB OFFER

- Organize **virtual introductory trainings** on **ESCAP LNOB methodology and platform** so that participants can find and interpret the results.
- Organize **in-person technical trainings** on **ESCAP LNOB algorithm** using open-source statistical software programme **R** and nationally representative household surveys.
- Build **local capacity** among **National Statistics Offices** so that they can independently **generate LNOB evidence** using **official data**.
- Provide **customized technical support** to **VNR drafting teams** on **SDG indicators** and beyond.
- Invite **trainees** to **national, regional or global events** to share their experiences and lessons learned, including **APFSD and HLPF**.

Follow-up support upon request

Introductory & Technical LNOB Trainings at national and subregional levels

Key Highlights

Leave no one behind (LNOB) is the central, transformative promise of the 2030 Agenda for Sustainable Development and its Sustainable Development Goals. Between 2011 and 2022, Nepal has made significant progress in enhancing overall access and closing the gap in respect to basic sanitation, basic drinking water and electricity, but more efforts are required to enhance access to clean fuels. Social protection benefit that leave no child, persons with disabilities or older persons behind can help Nepal accelerate reductions in poverty (SDG 1) and inequality (SDG 10).

Figure 1: Over time progress in selected opportunities, 2011-2022

Source: DHS 2011, 2016, and 2022

Access to **basic sanitation** among the **furthest behind groups** has increased from 12 per cent in 2011 to 54 per cent in 2022. The gaps between the average access rate and the furthest behind groups have reduced, from 26 to 15 percentage points. In 2022, the furthest behind groups in access to **basic sanitation**, poorer households in urban areas in which members have lower education, comprises 14 per cent of the Nepalese population. Efforts should be targeted towards those in most vulnerable provinces, such as Madhesh province.

Access to **basic drinking water** among the **furthest behind groups** has increased from 72 per cent in 2011 to 93 per cent in 2022. The gaps between the average access rate and the furthest behind groups have reduced, from 14 to 3 percentage points. In 2022, the furthest behind groups in access to **basic drinking water**, poorer households in rural areas in which members have lower education, comprises 13 per cent of the Nepalese population. Efforts should be targeted towards those in most vulnerable provinces, such as Lumbini province.

Access to **clean fuels** among the **furthest behind groups** has increased from 0 per cent in 2011 to 5 per cent in 2022, and from 38 per cent in 2011 to 88 per cent in 2022 in respect to access to **electricity**. While the gaps between the average access rate and the furthest behind groups in respect to **clean fuels** have increased, from 24 to 40 percentage points, in respect to **electricity** the gaps have reduced, from 38 to 8 percentage points. In 2022, the furthest behind groups in access to **clean fuels**, poorer households, comprises 40 per cent of the Nepalese population. Similarly, the furthest behind groups in access to **electricity**, poorer households in rural areas in which members have lower education, comprises 13 per cent of the Nepalese population. Efforts should be targeted towards those in most vulnerable provinces, such as Karnali and Sudurpashchim provinces.

VNR – LNOB Discussion

- Would you like to **include quantitative LNOB evidence** on SDGs under review?
- Are you willing to share **anonymized micro data**?
 - **Palau** and **Vanuatu** already shared.
 - Samoa HIES (2018)
 - Micronesia HIES (2019)
 - Solomon Islands (DHS 2015)
- What **type of assistance** would be most suitable?
 - Introductory/Technical Trainings on LNOB (in-person or virtual)
 - VNR-specific LNOB evidence generating/drafting workshop at national or subregional levels
