

# North and Central Asia 2024 VNR Clinic

Using the VNR to Strengthen Evidence-Based Policy on Sustainable Development and Targeting Those Left Behind

Mainstreaming LNOB evidence to VNRs

3 November 2023  
Almaty, Kazakhstan

# What is ESCAP LNOB analysis?

## ESCAP LNOB Analysis

- An empirical analysis of inequality and gaps in access to key services and opportunities
- An efficient disaggregation tool that captures intersectionalities among individual/household circumstances
- Driven by data that are nationally representative and ideally conducive to subnational disaggregation
- Based on Classification and Regression Tree Analysis (CART) and Dissimilarity Index

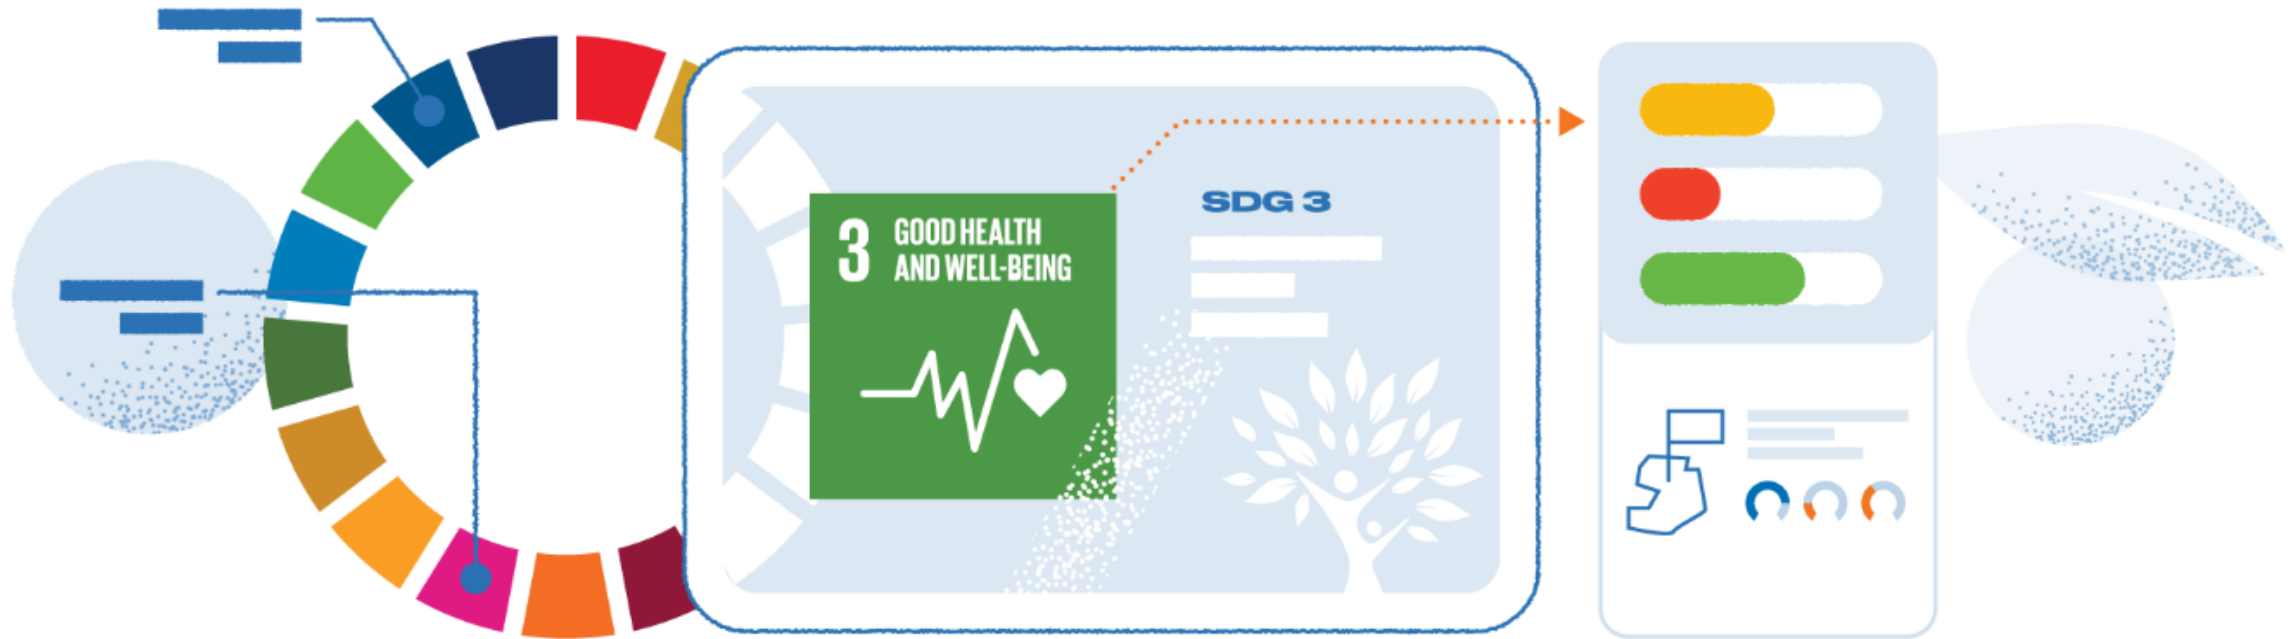

## Basic Assumptions

- Access to key **services and opportunities** should be universal.
- **Individual or household circumstances** should **NOT** impact access.

# Why is LNOB analysis important?

## Find which SDGs have the most "Left Behind"

SDGs are not equal in terms of the size and composition of groups left behind in their achievement.

## Uncover who are the "Left Behind" in specific SDGs

Unique combinations of individual and household circumstances identify who are left behind and where.

## Monitor gaps and inequality in SDG achievements?

The groups that are furthest left behind change over time across SDGs both for the good and the bad.

# Who can use the LNOB analysis?

## Governments

Design and implement truly inclusive development policies that leave no one behind.

## Civil Society

Advocate and influence policy design and implementation with evidence.

## Academia

Conduct more research inspired by latest LNOB results.

## Development Partners

Support policymakers with inclusive projects that contribute to sustainable development.

- **Highlights inequalities** in SDG indicators at **national** and **subnational** levels for **30 countries** in Asia and the Pacific in **2010-2022** period based on **DHS** and **MICS** data.
- **Identifies** groups that are **furthest behind** in **16 SDGs** on **basic services, child health, women's health, education, VAW and financial inclusion** based on demographic, socio-economic and cultural circumstances.
- **Helps** policymakers understand **whom to prioritize for interventions** to reduce inequality of opportunity.
- **Monitors** gaps and inequality in SDG achievements and supports **Voluntary National Reviews**.

# Current Data Sources

---

DHS and MICS Surveys

## Sources used

---

**Multiple Indicator Cluster Survey (MICS)**

**Demographic and Health Survey (DHS)**

## What they are

---

**Nationally representative household surveys** that provide data for a wide range of monitoring and impact evaluation indicators in the areas of population, health, and nutrition.

## Why were they selected

---

**Comparability** across countries

**Accessibility** of the data

The **rich set of questions** on health, demographic and basic socioeconomic data that refer both to the household and to individuals

## Availability

---

**30**

Asian and Pacific Countries

### Basic Resources

- Basic drinking water
- Basic sanitation
- Clean fuel
- Electricity
- Internet usage
- Mobile phone (household)
- Mobile phone (individual)

### Child and Family Health

- Ability to protect from COVID -19
- Family planning (demand met with modern methods)
- Skilled birth attendance
- Overweight
- Stunting
- Wasting
- **Birth Registration (Soon)**

### Finance

- Bank account (household)
- Bank account (individual)
- Financial Inclusion

### Education

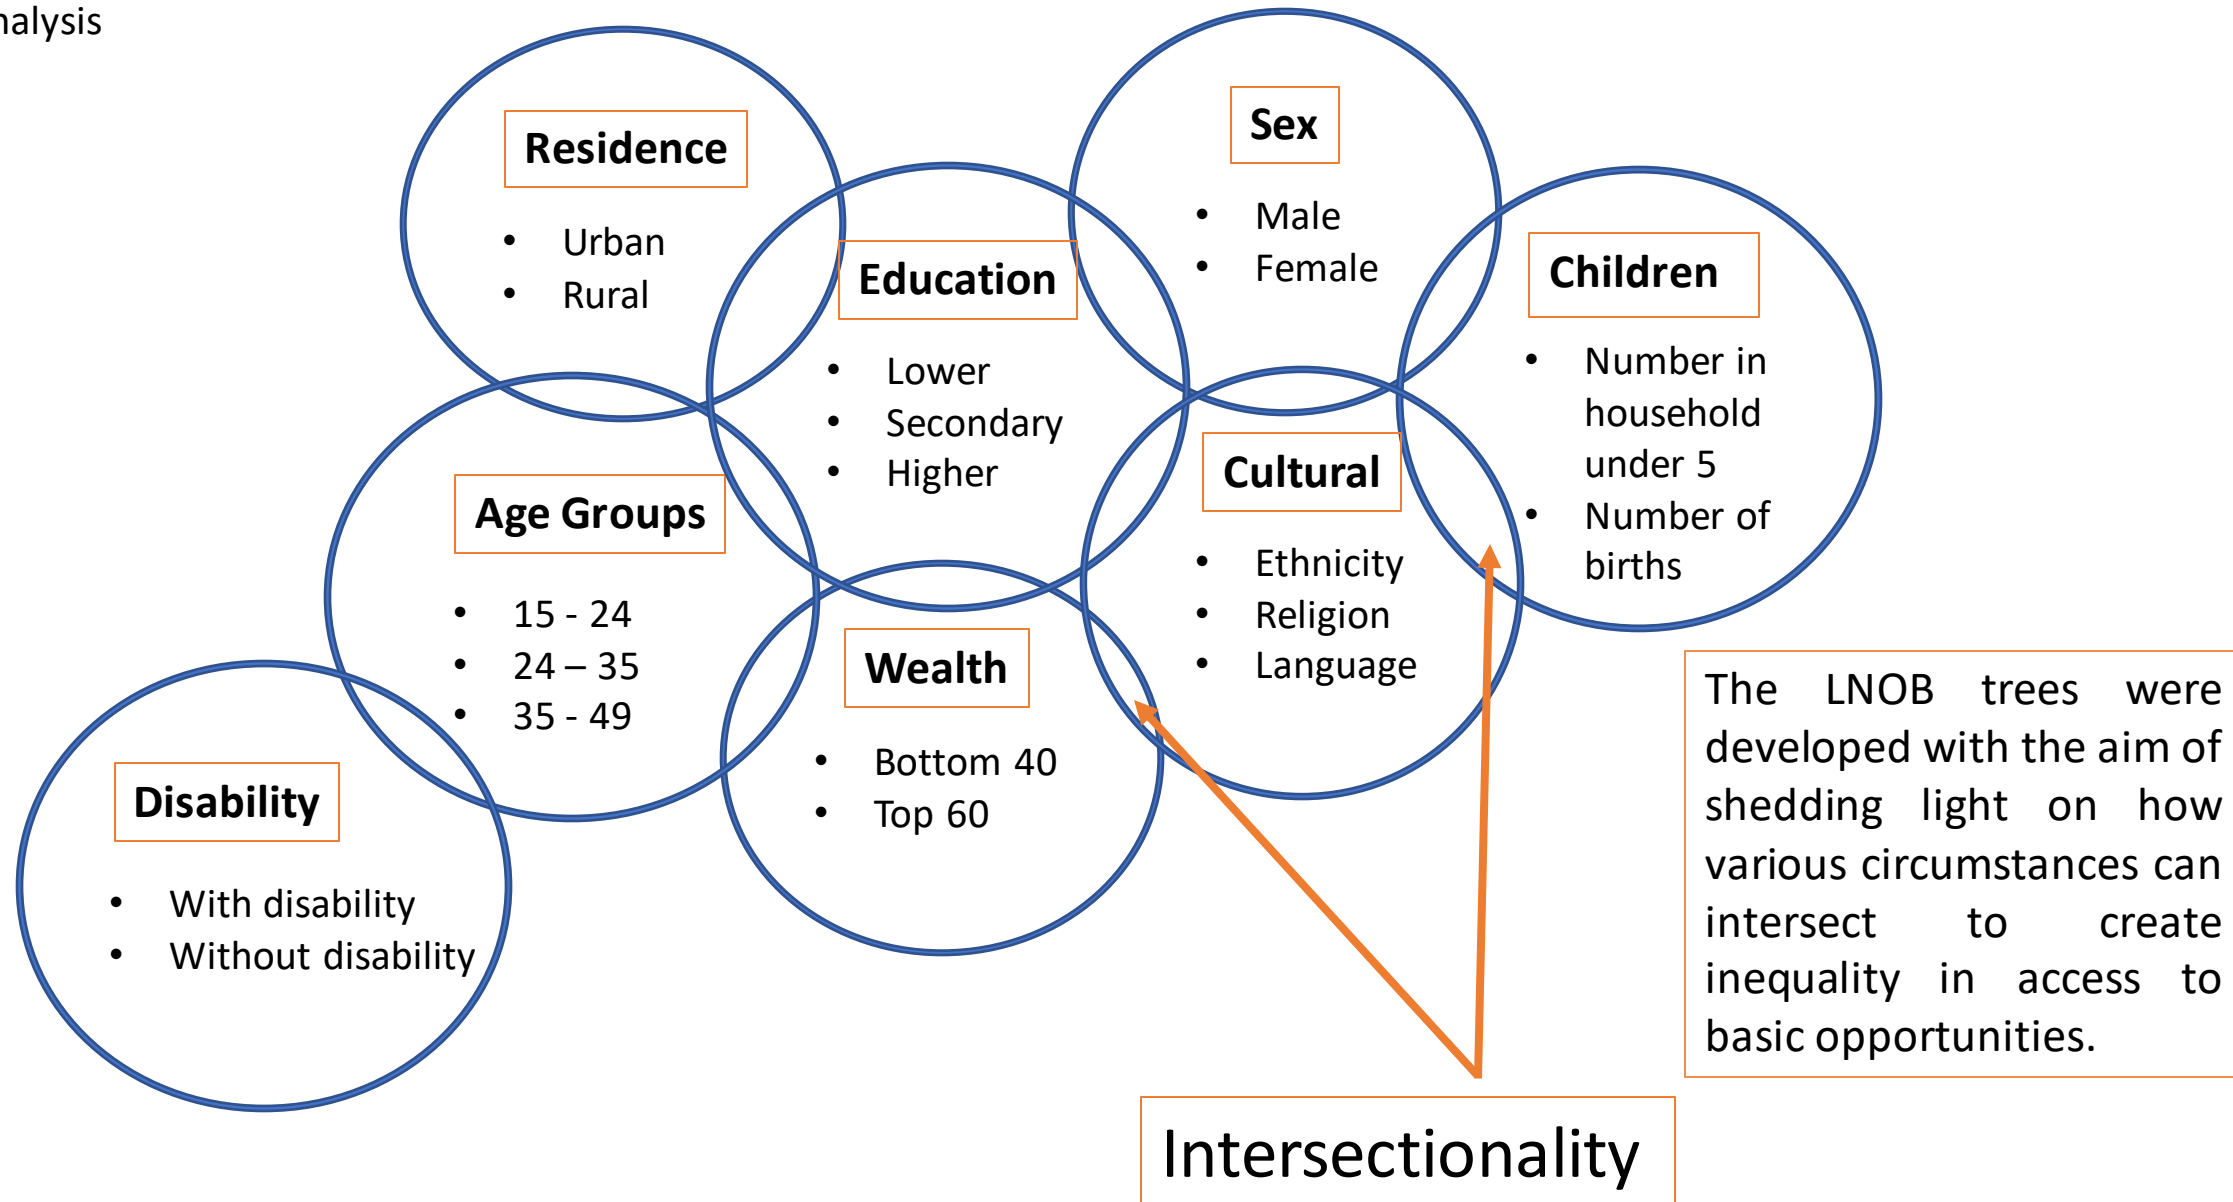

- Early childhood education
- Secondary education (completed, 20-35 yrs)
- Secondary education (completed, 35+)
- Tertiary education (attended, 25– 35 yrs)
- Tertiary education (attended, 35+)
- **ICT Skills (Coming Soon)**
- **Literacy (Coming Soon)**

### Violence against women

- Any type of violence against women
- Psychological violence against women
- Violence against women justified
- Physical violence against women
- Sexual or physical violence against women
- Sexual violence against women

## About the Social Protection Simulator

The ESCAP Social Protection Simulator estimates the impact of introducing social protection scheme on poverty, inequality and consumption. The impact can be estimated for rural and urban households, as well as for different income groups and family configurations. It also computes the cost of simulated programmes, providing different illustrative options to expand fiscal space for social protection.

Users can design social protection schemes in a country by setting parameters related to eligibility criteria, coverage levels and benefit amounts. The Simulator allows the user to analyze one scheme at a time or to combine different schemes and build a customized social protection package.

# Social Protection and SDGs in Armenia

1

UNIVERSAL CHILD, DISABILITY AND OLD AGE BENEFITS **IN ARMENIA...**

2

WOULD LIFT

**44%**
