**Note:** Please complete this form and hand it to the Conference Officer at the desk in the Conference Room.

1. Some surveys conducted by NSO such as Survey of Population Change and Multiple Indicator Cluster Survey can be used to evaluate the completeness of birth and death registration. These surveys provide information on unregistered births and deaths. Moreover, the data on causes of death is useful in setting policies to prevent the occurrence of diseases that cause death.
  2. It is recommended to collect 13-digit personal identification in health-related surveys in order to link with other databases for instance population registration database, poor people database, elderly database, disabled people database, etc.
