Subject: Georgia

Georgia has a system of integrated agricultural censuses and surveys, which is managed by GEOSTAT. Agricultural census is the central component developed within the overall framework of the census-survey system. It is the main source of frame for all agricultural sampling surveys.

The first agricultural census in the history of independent Georgia was conducted in 2004 with collaboration and financial and technical support of Food and Agriculture Organization of United Nations and the European Commission.

Agricultural Census 2014 was the second agricultural census in Georgia. It was conducted together with Population Census.

Support of different international organisations is noteworthy, which always plays crucial role for the development of agriculture statistics: USDA, UN FAO and WB
