

Statements from Republic of Korea _ Agenda 3(e)

The statement on Agenda 3(e) spoken by Mr. Hyung Seog KIM, Director, International Cooperation Division, Statistics Korea.

3(e)

Republic of Korea is trying to help build agricultural statistical capacity in the region by hosting a series of training in courses in Korea together with the SIAP.

We offered training courses at the KOSTAT's Statistical Training Institute in 2016, 2017 and 2018.

When it comes to remote-sensing technology in agricultural statistics, RoK like India, strongly supports to using the technology in the region. We have used this technology for estimating arable land census and agricultural land area survey.

As for the agricultural census, we have combined these giant surveys with population and housing census since 2010 and this approach was proved to be quite successful in terms of cost-effectiveness.

So we are ready to share our experience not only in remote sensing technology but also agricultural census with member countries in the region.
