

Statement from Vietnam on Draft of declaration on navigating policy with data to leave no one behind

On behalf of the General Statistics Office of Vietnam, I would like to express my support for the draft of declaration on navigating policy with data to leave no one behind. The General Statistics Office would make our best to implement agenda 2030.

Given the constraints on limited human resources and financial issues with regard to the GSO and the statistical units of ministries in their efforts to improve the quality of data, I would like to call for support from international organizations and development partners as well as experience sharing from other national statistics offices.

Also, I also would like to recommend that the draft declaration will be endorsed at high level. Thank you.
