

Country Statement by Myanmar as of Agenda Item 3(b)

Myanmar welcome the environment gender indicators in the proposed set for Asia and the Pacific. Central Statistical Organization developed the National Indicator Framework in 2019. It consists of 286 indicators. Eight environment gender indicators are available from the National Indicator Framework (NIF). Myanmar conducted 2019 Inter-censal survey in 2019 and Demographic & Health Survey (DHS) in 2015-2016. Again DHS will be conducted in 2020-2021.

I hope, most of the proposed indicators are available through 2019 Inter-censal survey and Demography survey. But Myanmar has a data gap at the environmental statistics according to our statistical system, decentralized system. Therefore UNDP also provide the technical assistance to Ministry of National Resources and Environmental conservation to develop the environmental statistics.
