INDONESIA COUNTRY STATEMENT

AGENDA ITEM NO: 3D ENVIRONMENT

Speaker: SAIRI HASBULLAH

Support

We do agree the report of the Secretary General on development agenda beyond 2015: "The road to dignity by 2030: ending poverty, transforming all lives and protecting the planet."

We believe that sustainable agenda can not be achieved without paying high attention to environment. NSOs should ~~pay~~ take a lead in providing data not only related to environment degradation ^{or disaster} but also in the areas of whether people have knowledge, awareness and interest in keeping environment preserved.

Indonesia, Statistics Indonesia, NMU pay great attention for environment statistics. We NMU ~~also~~ do the survey on the knowledge, awareness, and the behavior of the people toward environment. For example the awareness/knowledge/behavior of the people toward using electricity, water, the

3 d cont'd - Indonesia

use of used water, garbage and the perception of the people toward ~~the~~ their physical environment.

We also recognize that it is also a need to collect ~~the~~ data statistics on environment by using spatial approach / village base approach. We collect data on incident of disaster in every village = flood, ~~land degradation~~ critical land, Land slide and many other related disaster information.

My point is ~~there~~ There are many approaches that could be done by users to provide data on Environment.
