

Thank you Madam chair and thanks to the strategic advisory body for their work and preparing the reports.

also support the Iran Issues in the report. There are some points to highlight.

one - The overall statistical information system consist of 3 layers, production, storage and dissemination and modernization in the All 3 layers should be considered.

three the modernization of statistical system is a new issue and there are no sufficient knowledge and experience in the region and so regional collaboration is very important.

two - E-governance is developing in some countries and this factor can be used to integrate modernization into as a leverage national strategies for the development of statistics

four Iran has conducted agriculture census in 2014 with using 4000 tablets in data collection stage. Also we want to do this for population and housing census in 2016. There are some useful experiences and can be shared to working group or to other countries.

thank you
