

United Nations Conference Centre, Bangkok

Item (3) (g) - Gender Statistics

Gender statistics are very important to monitor the gender disparities. Therefore I supported the core set of gender statistics provided by the secretariat.

Sri Lanka provides statistics for Males & Females separately wherever possible. However some domains mentioned in the document is difficult to collect eg such as Environment and climate change need to define the indicators

Variables ^{need} to compute these indicators should be included in ongoing surveys rather than conducting separate effort.

Statistical organizations should be further discussed about this.
